H_2O.ai

- https://www.h2o.ai/ - since 2011 as **Oxdata**, since 2014 as H_2O
- https://en.wikipedia.org/wiki/H2O_(software)
- https://www.linkedin.com/company/h2oai/ (~200 employees)
- leading open source ML & AI platform
  - https://github.com/h2oai
- estimated ~250K users, over 18K companies
- free open-source, free for academic use, collaboration with researches
  (Java, Python, R – runs on Linux, macOS, MS Windows, Hadoop/Spark)
- integrates with python/Jupyter, provides in-browser graphical interface

```
conda install -c h2oai h2o=3.22.1.2
import h2o
h2o.init(max_mem_size = "2G")
from h2o.estimators.glm import H2OGeneralizedLinearEstimator
glm_multi_v1 = H2OGeneralizedLinearEstimator( ... )
glm_multi_v1.train( ... )
...
```

- paid option – "Driverless AI" – available on major clouds.
  - http://docs.h2o.ai/driverless-ai/latest-stable/docs/userguide/index.html
- uses clusters of GPU-servers to run hundreds of models in parallel
- provides automatic feature engineering
- MLI (ML Interpretability)
